### **NEW OCENS QWIP Service Delivers News, Sports and Stock Info to Satellite Users**

Service provides low-cost satellite access to scores, market data, and global news

**SEATTLE, WA January 6, 2015** – OCENS today announces the release of its QWIP (Quick Web Information Pulls) service. QWIP is an aggregator service making news, sports and stock market information available to satellite users. Low-bandwidth customers can now reach the type of content never before available to them given the slow speeds at which their connections operate. High-bandwidth satellite customers who want news and sports information but are concerned about the airtime implications of going to the web sites at which this content is most typically available also will enjoy and benefit from QWIP.

QWIP allows you to select the news, sports, sports teams, or stock market information of interest to you and then quickly pulls information concerning them from the web. A request for World news for example returns a Top 10 list of news items and a one to two sentence summary of each item. A More Info tab adjacent to each such summary allows the reader to place a follow-up request for additional information on that specific news element. Of course, auto-dialers for all of the major Iridium, Inmarsat, and Globalstar equipment are built into the service.

- QWIP news includes multiple categories covering US and world news, business, technology, politics, entertainment and others.
- QWIP sports emphasis is presently on the major US sports such as pro and college football and basketball, baseball, hockey and soccer. Sports scores, game recaps, and league and team-specific news QWIPs are available. Game scores are further linked to a Recap button for the team fan wanting to learn as much about the game he or she wasn't able to watch.
- US stock market indices and individual stock performance is available.
- QWIP also includes a chat tool that allows users to engage the broad QWIP community about specific games, teams, or news items.

QWIP service is available for a nominal charge per month. This monthly fee includes with it a volume of 'QWIPs' with a QWIP being the unit of currency within the service. Most news, sports, stock reports, and other information 'cost' the user one QWIP. Additional QWIPs can be purchased from within the QWIP client or by purchasing QWIP vouchers in 100, 200, 500 and 1000 QWIP denominations from the OCENS website or an OCENS distributor.

#### **About OCENS, Inc.**

OCENS data services, software and apps merge easy-to-use applications with unprecedented content offerings to affordably deliver data over satellite phones to remote users around the world. OCENS weather, ocean and fishing services provide access to the largest collection of GRIB and classical data that can be found anywhere. Using patented pull-me technology, OCENS WeatherNet provides fast access to the world's widest selection of weather and ocean information over PC and Mac platforms. GRIB Explorer processes highly compressed GRIB information into unique decision products for use on PC, Mac or iPad platforms. MetMapper transforms static weather charts and satellite imagery into dynamic planning tools. OCENS' iPhone, Android, Windows phone and Blackberry apps provide weather and messaging services to the smartphone community. Its SpotCast weather service provides multi-day, multi-point forecasts of weather and ocean conditions for any point on earth in a highly compact form. OCENS augments its software core with satellite equipment and airtime solutions it provides in cooperation with all the major satellite providers.
